What is Solution4SLD?

Solution4SLD (*Specific learning disabilities solutions Interactive E-platform for schools*) is an Erasmus+ project that started in 2022. It is an innovative strategic partnership between 4 organisations from Lithuania, Malta and Bulgaria.

The aim of the project is to help adapt the education system for children with specific learning difficulties (SLD). It provides learning content, guidance, and support material for educators and specialists on how to provide a more inclusive educational experience for children with SLD, in particular focusing on **dyslexia** and **dysgraphia**.

The latest data estimates that throughout the population, approximately

15%

struggle with
a learning disability

12%

have an impairment
in reading

10%

experience
difficulty in writing

Solution4SLD came about because in each of the countries involved in the project, educators do not receive enough information about SLD and how to effectively address it within a classroom context. While there are support systems in place, both public and private, it can be difficult for educators on the ground to know what SLD is, how to spot it, what support exists, and when and how to refer to them. Moreover, educators need practical tools and resources that they can readily use in the classroom in order to help children as much as possible.

Solution4SLD targets children with specific learning difficulties aged 6-12, the educators who teach and work with these children, other pedagogical staff, specialists such as speech language pathologists, and parents.

What have we done?

1. **Digital Handbook for Teachers and Educators:** a specially designed guide to introduce educators to SLD, enabling them to better recognize how dyslexia and dysgraphia present themselves in children and to give tips on how to provide better learning support. This was written with educators in mind, using practical and easy to understand language. The book also includes a chapter on each participating country's status quo in terms of support systems in place for children with SLD.
2. **An e-learning platform for educators and students: 72 worksheets** (designed for children of multiple age groups) that educators can use online or download for free to use directly with children. These worksheets allow educators/parents to help children work on skills across 6 areas of development: visual perception, phonological perception, reading technique, text comprehension, grammar skills, and coherent language. The worksheets are available in English, Lithuanian, Bulgarian, and Maltese.

18 of these tasks have been translated into **interactive online games** that children can play on the platform.

Who are we?

All Solution4SLD material can be accessed for free on the project's website:
